

Cloudexa Frontend Developer Interview Assignment

Please create a single page application that consists of the following:

- A stacked list of notifications where each notification matches the mockup below:
<https://sketch.cloud/s/JKWa9/a/mJQ2v9>
- A dismiss button per row that will remove a notification permanently from view.
- A filter that can be used to display only **today's** notifications.

Please setup a free account at contentful.com to create a simple notification object and the API needed to fetch notifications from your single page app.

Feel free to use a UI library to achieve the desired outcome.

Finally, please be prepared to explain your workflow end-to-end, assuming that this is a business application and you are collaborating with at least one other developer.
